MARIST

Requirement Gathering

Dear Client,

We are writing to inform you of the list of questions we went over with you late last week. Detailed here will be a list of all questions. Please look over the documentation carefully so that we can be sure that we are providing you efficient consultation.

Client Questions

- One of your requirements mentioned in the overview document we quote you saying is "Your system should collect statistics about the opinions in the system and should provide a RESTful API that allows for querying such statistics." Can you elaborate on what you implying by statistics?
- In the overview you note that you want the owner of a previous vote to be able to remove their votes. Does this mean that the function should be restricted to the vote owner, prohibiting root from removing owner votes?
- From a user interface perspective, it may not be beneficial to display the sentiment information and the opinion next to, together, or simultaneously.
- How we currently envision account management is to have root privileges within the application. Is this acceptable?
- What platforms should users be able to access the application on?
- Another of your requirements mentioned in the overview document we quote you saying is "Technical merits of such an interface would be less" if we implement a web-based application. Does this mean that by using "less" technical merits the project will not meet your delivery requirements?
- What are the expected possibilities of expansion regarding integration with other schools around the nation?

Kindest Regards,

Consultation Team
